

COMPLY

Compliance

“The state or act of conforming with or agreeing to do something, often in response to a government regulation or corporate standards”

Why Comply?

Technology related litigation fees are common concerns of the CFO while the CSO and CIO are struggling to ensure compliance. More organizations are redirecting funds towards their information security budget. Most regulatory compliance issues are specific to a vertical market, such as SOX & GLBA in finance, HIPAA in healthcare, PCI in retail and ISO 17799 and Security audits in generic security space.

How do we do it?

Paritra Security Solutions constantly monitor vendor security advisories for compliance updates and regulatory changes. Once a change is identified, existing policies are examined and determined if updates are needed or new policies are written. If required, a secure compliance policy update is issued.

Components Used

Dashboard

Monitors compliance charts.

Reports

Generates compliance and compliance capability reports.

Audit Module

Conducts SANS Router Policy Audit, HIPAA Compliance Audit, PCI Compliance Audit, ISO/IEC 17799 Compliance Audit, SOX Compliance Audit, GLBA Compliance Audit.

Policy Module

Conducts general device security, vendor advisory audits, custom security audits, and provides ways to create corporate standard policies.

About Us

Pari Networks provides effective and easy to use security risk management solution. We have a patent pending approach for combining network operations, regulatory/corporate compliance, security assessments and remediation actions. This enables simplified administration of networks ensuring secure and regulated business operations for our partners and customers.
