

Company & Product Overview

Pari Networks, Inc. provides network security risk and policy compliance management solutions to enterprises and managed security service providers. Company was formed with a mission to provide an effective security risk management solution for multi-vendor and multi-technology networks by enabling simplified administration of networks to ensure secure and compliant business operations.

The founding team left senior posts at Cisco to develop a key solution for creating and maintaining a secure compliance posture, with out-of-the-box configuration oversight and one-step mitigation. It is an industry first central view of elements assessed against both internal/external compliance requirements and life cycle management. These solutions help both partners and customers to control wide range of management and business functions from a single platform leading to improved business operations.

Pari Networks products and services enable our partners and customers to achieve compliance, enforce security policies, pro-actively mitigate threats, and effortlessly manage networks.

Solution Summary

IT and security professionals are constantly challenged to optimize resources and costs with attention to:

- 1 Compliance with government/industry and corporate regulations
- 2 Implement and enforce consistent security policies and configurations (security both devices & data)
- 3 Quickly identify and mitigate security risks before interruptions to business operations (secure the network)
- 4 Manage IT infrastructure with a constant drive to reduce operations expenditure (maintain availability)

Pari Networks products and services alleviate these challenges and provide multiple deployment models (appliance, software, portal).

How does the product work?

- 1) First it auto-discovers your network through various protocols such as SSH/Telnet/HTTP/HTTPS and/or SNMP
- 2) Provides detailed inventory information of the network like device names, serial numbers, model numbers, etc.
- 3) The product has a cool reporting frame work providing reports on Network Inventory, Product Life Cycle status (end of life), Security advisory verification & Compliance reports
- 4) Then it tracks all changes (network configuration, software, and hardware) in real time and captures them in an audit trail.
- 5) It can then screen all changes against authorized policies to see if they comply with regulatory requirements or IT best practices
- 6) It automatically validates new changes against polices before they are pushed to the network.
- 7) It will also automate the change review process
- 8) Impressive ability to show detailed vulnerability reports, push out configuration changes to mitigate the vulnerabilities for all network devices from one console
- 9) Conducts consistently scheduled security & policy assessments, using profile functionality for automatic reporting and mitigation actions for any changes
- 10) Enforce compliance monitoring, violation reporting and resolution in an automated manner, easily customized to meet your unique IT environment.

What does the solution provide you?

Using Pari Networks solutions you can:

- 1 Enforce **compliance monitoring**, violation reporting and resolution in an automated manner, easily customized to meet your unique IT environment
- 2 Conduct consistently scheduled security & policy audits, using profile functionality for automatic **reporting and mitigation** actions for any configuration/policy changes
- 3 Provide effective **security policy** enforcement coupled with proactive management and monitoring
- 4 Provide **automated network configuration** deployment with easy to use and flexible configuration applications
